Note:

For each university, a negative percentage shows how much Yale salaries would have to increase to be equal to the other university and a positive percentage indicates how much Yale salaries could drop and stay equal. This survey includes ladder faculty in all schools except Medicine, not just Arts and Sciences. Other professional schools are included.

Beginning in 2003, Yale's submission to the AAUP survey includes all full-time instructional faculty and includes variants of the professor title as professors. For example, in 2003 the Yale figures for "professor" include Professor Adjunct, Clinical Professor of Law, and Professor of the Practice. This change added 55 faculty to the professor category in 2003, 16 to associate professor, and six to assistant professor. This expanded definition of the ranks reduced the mean salary in 2003 by 2.6% for professors, 3.4% for associate professors, and 0.3% for assistant professors, compared with what the mean would have been without these faculty. Any comparison of salaries in 2003 and later to salaries before 2003 should take this effect into account.
