

Director of Science Product

This position is responsible for shaping Knewton's emerging Medical/Science Division. The Director will be tasked with leading a team of medical and scientific content editors and launching Knewton's science based educational products. The Knewton Medical Team will deliver high quality instruction in Biological and Physical Sciences.

Requirements

- Exceptional biological science domain expertise
- MD or PhD
- Passionate about education and/or internet companies
- Knowledge of MCAT and Med school admissions
- Experience leading teams
- Outstanding English written and oral communication skills

Plusses

- Experience developing consumer products
- Content publishing experience (textbooks, periodicals, etc.)
- Start-up or Internet company experience

We will relocate the right candidate.

212-KNEWTON

About Knewton

Overlooking NYC's Union Square, Knewton is poised to transform education with our patent-pending adaptive learning technology and live online video classes. Knewton has developed the industry's most powerful adaptive learning engine, customizing educational content to meet the needs of each student. Whereas traditional education provides the exact same experience to every student, Knewton customizes content down to the concept level each day for each student, based on what they know and how they learn best. Today, our revenues come from delivering our own test prep classes, but we are quickly expanding into licensing our revolutionary platform to major education companies to power personalized e-Textbooks and online classes.

All full-time positions include subsidized healthcare, dinners M-F, metrocards, monthly massages, and equity in the company.

Knewton was founded by Jose Ferreira, a former Kaplan executive, with funding from Accel Partners, Bessemer Venture Partners, First Round Capital, and prominent angel investors. The company was selected as the AO 250 leader in Digital Education for 2009 and was a finalist in Amazon's 2008 Start-Up Challenge. Knewton is participating in a Harvard Medical School study on using crowd-sourcing to power diagnosis, and is one of four companies selected by Princeton University's Institute of Advanced Study to participate in an 18 month long study on using technology to innovate education.
