

Senior Research Scientist I, Wyeth Research, Cambridge, MA

Job Duties & Responsibilities:

We are seeking a talented and highly motivated Ph.D. scientist to join the Protein Biochemistry group within the Structural Biology & Computational Chemistry Department. This position involves providing recombinant proteins to support the multidisciplinary drug discovery efforts for both small molecules and biotherapeutics, including assay development, phage display screening, high throughput screening, enzymatic and biophysical characterizations, reagents for immunization, and structure determination using X-ray crystallography. Responsibilities include the development of purification schemes for recombinant proteins expressed from different host cells, and characterizations using various biochemical/biophysical techniques.

Requirements:

The ideal candidate should have a Ph.D. in biochemistry, molecular biology or a related discipline with a minimal of 1-4 years of successful postdoctoral or industrial experience. Ability to work independently, as well as part of a team, and strong interpersonal and communication skills is required. Previous protein biochemistry experience and knowledge with gene expression and protein structure/function are highly desirable.
